University Bayreuth

TUM School of Management

1. Introduction to git
2. Setting up your SSH key
3. Clone the exercises

1. Introduction to git
2. Setting up your SSH key
3. Clone the exercises

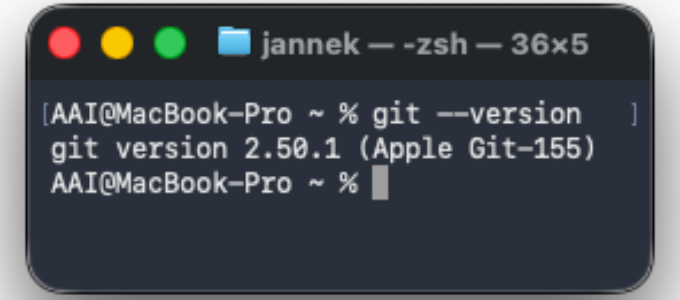

Introduction to Git

- Git
- Version-control system
- Tracking changes in files

- Purpose of Git for this course
- Clone (“download”) exercise notebooks

- Check if you already have installed git
  - Windows: Open Windows-Search type in “cmd” and hit enter
  - MacOs: Open Spotlight type in “terminal” and hit enter
  - On both systems, execute the command: `git --version`

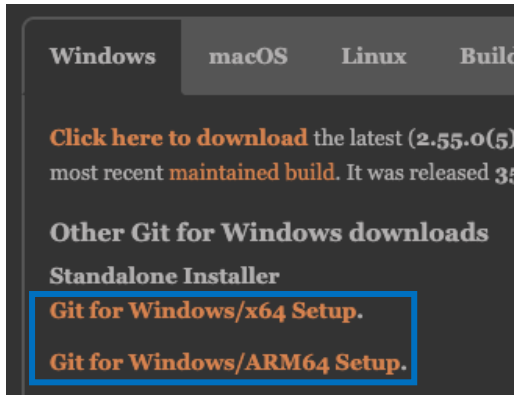

If you see something like “git version x.xx.x”, you have already installed git and can skip the next slide!

Prof. Dr. Niklas Kühl

Introduction to Git

- If you have not installed git yet, follow the guideline on the official website
- Windows: https://git-scm.com/install/windows download the Standalone Installer for your setup and click through the installation wizard.

- MacOS: https://git-scm.com/install/mac make sure you have homebrew installed, open Spotlight, search for “Terminal” and hit enter. Type in `brew install git` execute it and you’re ready to go.

Setting up your SSH key

Where our code lives: A quick note on GitHub.
Now that you have Git installed on your computer, we need a place to download our course materials from. For this course, we host all our repositories on GitHub, the world's most popular platform for storing and sharing code.

> ⚠ **Disclaimer:** If you do not have a GitHub account yet and prefer not to create one for privacy or personal reasons, you are **not obligated** to do so. You can simply skip this entire section and download the code directly via your browser (see page 13).

Prof. Dr. Niklas Kühl

Setting up your SSH key
Step 1: Creating the key

Step 1.1: Open the terminal

- Windows: Open Windows-Search type in “cmd” and hit enter
- MacOs: Open Spotlight type in “terminal” and hit enter

Step 1.2: Creating the key (identical on both systems)

- Execute the following command (replace the email with your own)

```
ssh-keygen -t rsa -b 4096 -C "your_email@example.com"
```

- You will pe prompted to provide the location where you want to create the private key file (we recommend to just press enter, to save it to the default location)

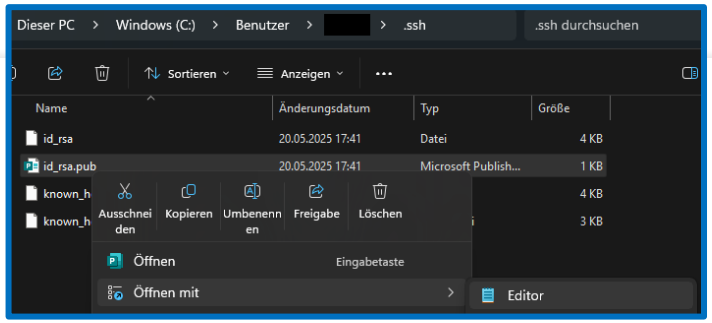

```
Enter file in which to save the key (.../.ssh/id_ed25519):
```

- Afterwards you will be prompted to choose a password. This is the password required to use the private key (we recommend to just press enter, to save it without a passphrase)

```
Enter passphrase (empty for no passphrase):
```

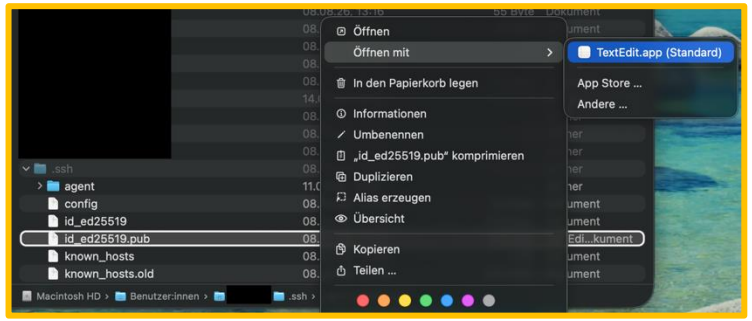

Prof. Dr. Niklas Kühl

Setting up your SSH key
Step 2: Copy the public key

Step 2.1: Find the public key

- Windows
  - Open the Explorer (win + e)
  - Navigate to C:/User/Name/
  - Allow the Explorer to display hidden files (Options => View => “Show hidden files, folders and drives” => Apply). You can find a guide here: https://chrisleverseo.com/forum/t/how-to-view-stop-viewing-hidden-files-in-windows-11.115/
  - Find the folder “.ssh” and in there open the file “id_rsa.pub” (open it with “Editor”)
- MacOs
  - Open the Finder (command + n)
  - Navigate to your home (Macintosh HD/User/Name/)
  - Allow the Finder to display hidden files with the key-combination: shift + command + .
  - Find the folder “.ssh” and in there open the file “id_rsa.pub” (open it with “TextEdit”)

Step 1.2: Copy the key

- Copy the content of the file “id_rsa.pub” (your public key)

**Please note: While the interface is shown in German, the layout remains exactly the same.*

Prof. Dr. Niklas Kühl

1. Introduction to git
2. Setting up your SSH key
3. Clone the exercises

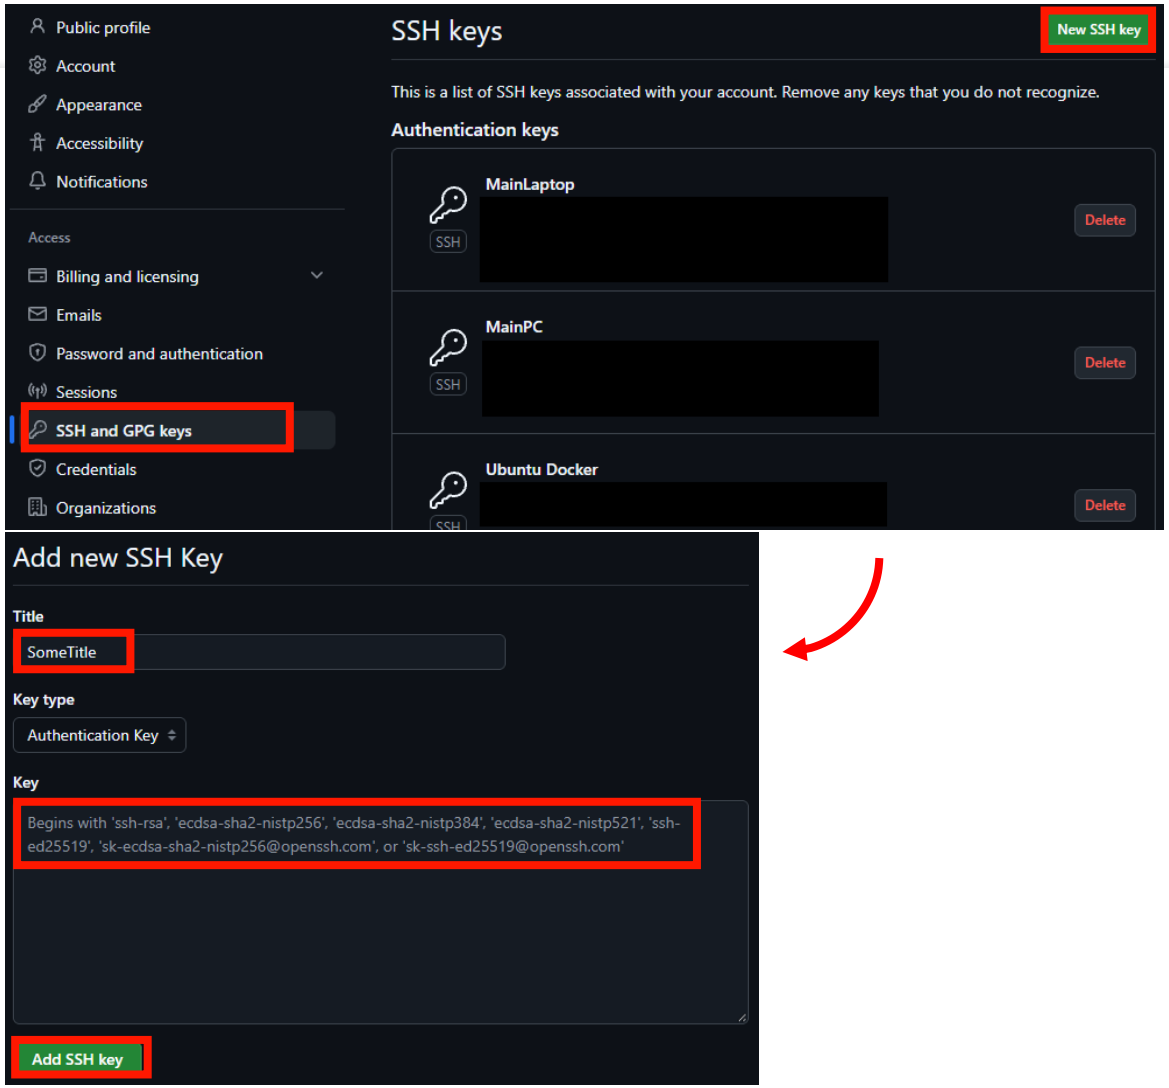

Clone the exercises (with your SSH-Key)
Step 1: Register your SSH-Key

Step 1.1: Open the GitHub-Settings

- Follow the link: https://github.com/settings/profile

Step 1.2: Register the key

- Goto “SSH and GPG keys”
- Click on “New SSH key”
- Enter a title and paste the key copied from “id_rsa.pub”
- Click on “Add SSH key”

Prof. Dr. Niklas Kühl

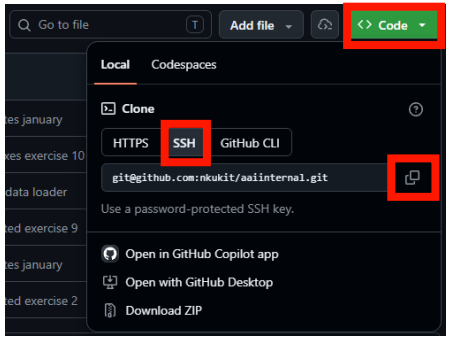

Clone the exercises (with your SSH-Key)
Step 2: Clone the exercise

Step 2.1: Open the GitHub-Page

- ***The link will be provided on moodle/elearning***

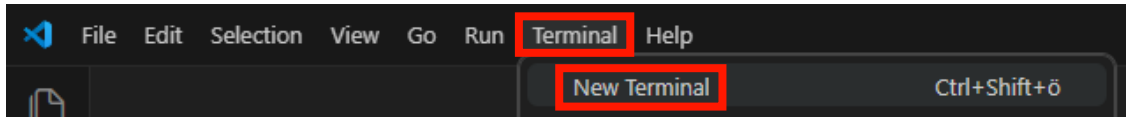

Step 2.2: Download with SSH

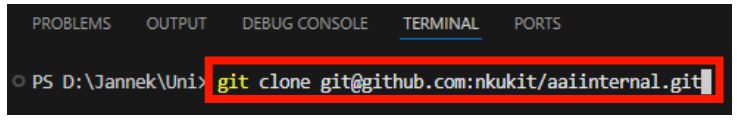

- Click on “Code”
- Choose the tab “SSH”
- Copy the link

Step 2.3: Clone it in Visual Studio Code

- Open the folder where you want to store your exercises
- Open a “terminal”
- Write the command “git clone ”, paste the link and execute it

Prof. Dr. Niklas Kühl

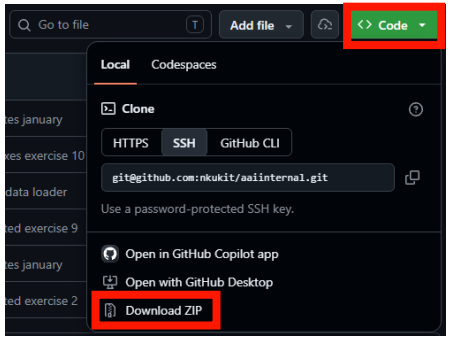

Clone the exercises (Without GitHub Account)

Step 1: Open the GitHub-Page

- ***The link will be provided on moodle/elearning***

Step 2: Download as ZIP

- Click on “Code”
- Press “Download ZIP”

Step 3: Unzip the file

- Windows: Follow this guide: https://support.microsoft.com/en-us/windows/experience/storage-filemanagement/zip-and-unzip-files
- MacOS: Just double-click the zip-file

Prof. Dr. Niklas Kühl

Until next week

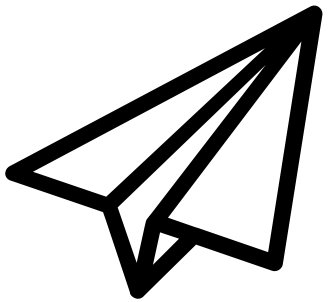

Make sure your setup works!

- Install GIT
- Clone the exercises

Problems?

Reach out in the moodle/elearning forum.
